About Chickasaw Capital

Stability 100% owned by employees and their affiliates **MLP Experience** PMs average 30 years Differentiated View Midstream is a total return asset class Differentiated Approach Disciplined investment process Performance History of attractive total returns

Investment Team

The Investment
Committee members
have worked together
since the inception
of the strategy.

Midstream Investment Environment

- Potential total return drivers favorable (AMZX)
 - Yield: 7.6% (2025e)
 - Dividend/Distribution growth: +6.4% for the AMZX (2025e)¹
 - Attractive valuation: 7.0x P/DCF
 - Free Cash Flow Yield: ~9.6% (2025e)
- Capital allocation skewed toward equity holders:
 - AMZX 5-year forward distribution CAGR: +6.9%
 - Buybacks: \$2.5bn YTD; \$7.7bn 2024; ~\$19.2bn executed since 9/30/20
 - Capex needs modest relative to free cash flow & market cap
 - Leverage: 3.3x Debt/EBITDA
- Durable Drivers and Macro Themes:
 - Strong total return potential through the end of the decade
 - Inflation protection: duration and fee escalators
 - Investors rewarding growth outlooks again
 - U.S. Natural Gas Mega Themes:
 - 1. Data Centers: pipelines provide critical power source
 - 2. LNG: Global energy security at forefront
 - 3. Reshoring/onshoring driven economic activity
 - Tight global capacity for all hydrocarbons

1. This is not a forecast of the portfolio's future performance. Distribution/dividend growth for the portfolio's holdings does not guarantee a corresponding increase in the market value of the holding or the portfolio.

Data for periods is presented as an estimate where indicated as companies have not reported financial results for the period.

Midstream Metrics: Where are we now?

2017 was the last year Midstream had substantial reliance on issuance in equity capital markets.

Today, Midstream is distinctively different with equity buybacks, and positively positioned for investors across several metrics.

Source: Bloomberg, LP; Morningstar, Company filings, Wells Fargo Securities, CCM, 9/30/25

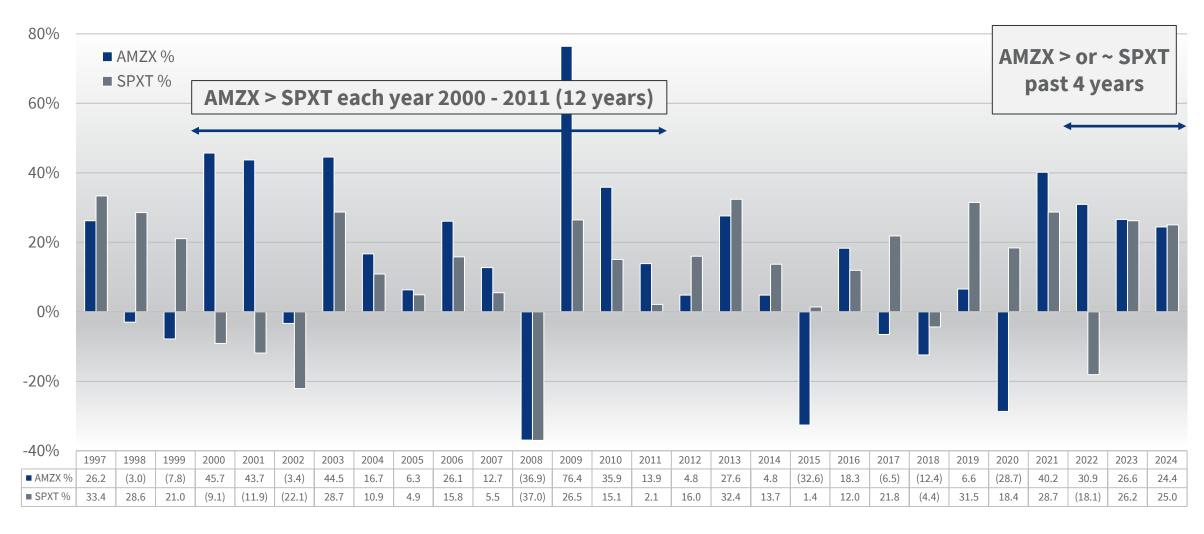

Data for periods is presented as an estimate where indicated as companies have not reported financial results for the period.

Midstream EBITDA vs. WTI

Due to predominantly fee-based contracts, Midstream consensus EBITDA estimates have shown little correlation to the price of WTI.

Source: Bloomberg, LP at 9/30/25. All figures shown for current model portfolio weights and holdings. EBITDA is the consensus estimate at each point in time for the weighted sum of each portfolio holding for the next twelve months (NTM).

NTM EBITDA vs. WTI Evolution

Alerian Weighted P/DCF

The current P/DCF ratio remains at the low end of its historic range and below the average for the historic period since 2008.

Source: Bloomberg LP, CCM

AMZ Weighted EV/EBITDA

The current EV/EBITDA ratio remains at the low end of its historic range and below the average for the historical period since 2014.

Total return performance and valuation have widely diverged since 2022.

3,000 15x 13x 2,500 11x 2,000 1,500 9x 10.3x 7x 1,000 8.8x 5x 500 Average = 10.2x | Current = 8.8x | Minimum = 7.7x

AMZ FCF Yield Versus Other Indices

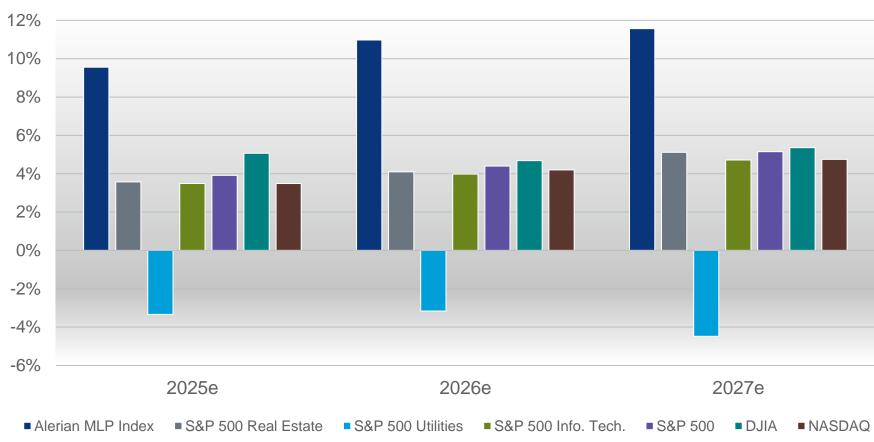

The FCF yield of the AMZ appears quite

dislocated from other relevant indices.

Source: Bloomberg, LP at 9/30/25

Data for periods is presented as an estimate where indicated as companies have not reported financial results for the period.

Estimated Free Cash Flow Yield

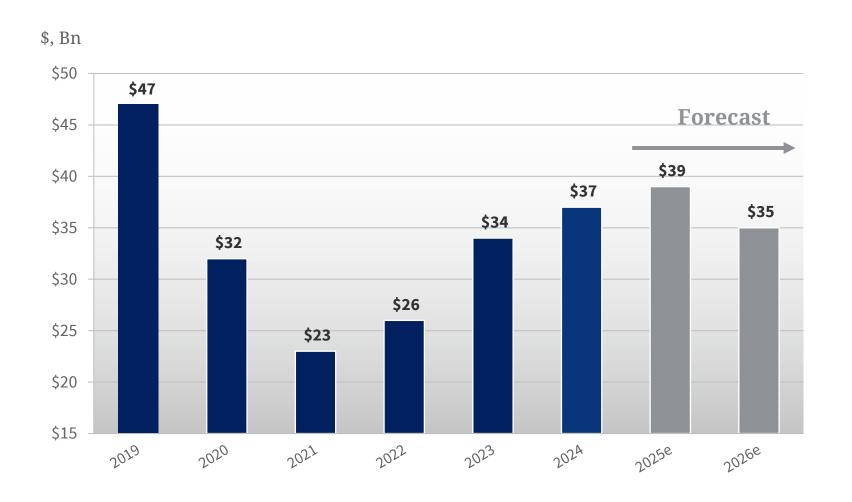

Change in CapEx Assumptions

Midstream capital expenditures have decreased materially, reflect discipline, and remain modest through the forecast period.

The slightly higher forecast period likely includes high return, fee-based, long-term contracted projects.

Source: Wells Fargo Securities Equity Research, 4/4/2025. Data for periods is presented as an estimate where indicated as companies have not reported financial results for the period. Excl VG capex.

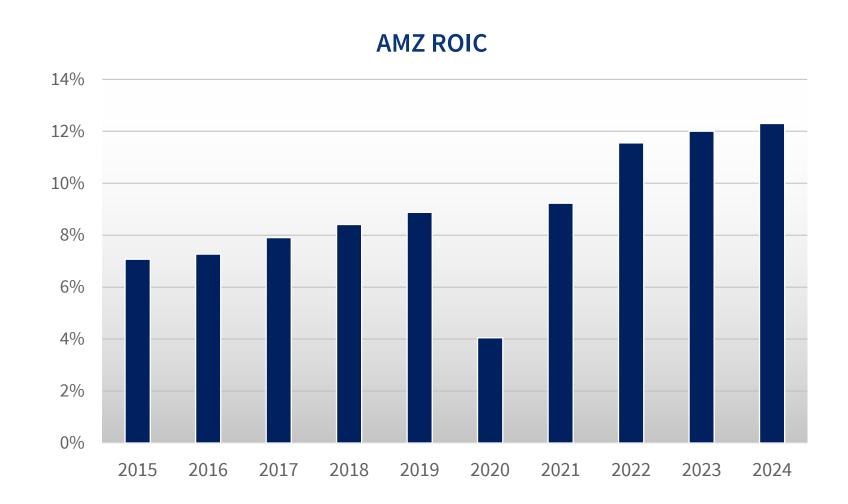

AMZ Return on Invested Capital (ROIC) 2015 – 2024e

Midstream ROICs, while increasing, were low during the 2015-2020 investment period.

ROICs have meaningfully increased since 2020 and could continue to move higher in future years.

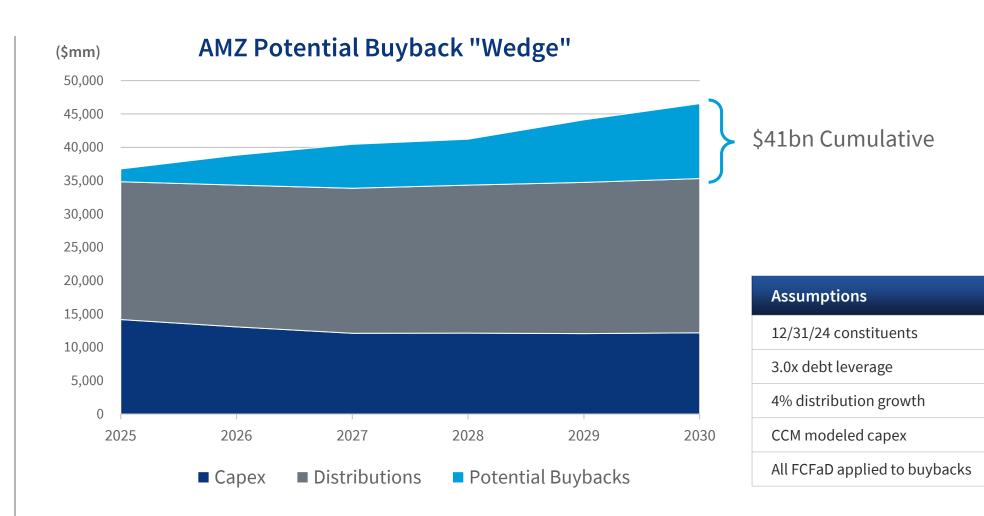

Source: Bloomberg LP, as of 9/30/25.

AMZ Free Cash Flow Available for Buybacks Forecast

Our forecast indicates the AMZ constituents could cumulatively repurchase \$41 billion of their equity through 2030.

Actual share/unit repurchases may vary significantly.

Source: VettaFi LLC, and CCM

Cash Return Forecast as a Percentage of the AMZ, 2024-2031

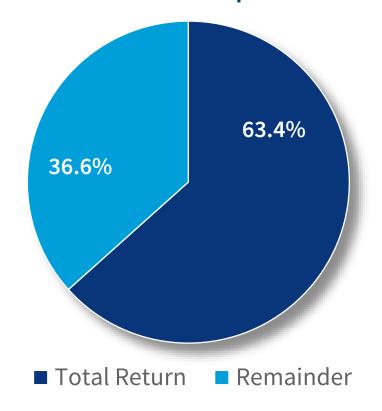

Summing distributions and buybacks to show cash returns to investors, we estimate the investors could receive ~63% of the current market capitalization of the AMZ by the end of 2030.

We estimate cash returns could encompass all of the market capitalization between 2031-2032 or 8.5 years.

Actual distributions and share/unit repurchases may vary significantly.

Total Cash Return Through 2030, % of AMZ Market Capitalization

Investment Process

Three Step Process

1

Research

In-depth company analyses complemented by assessments of demand and supply factors affecting U.S. Midstream infrastructure.

2

Appraise

Rigorous, cash flowbased techniques to assess intrinsic value. 3

Construct

Time-tested process to build a portfolio with lower risk and a higher expected total return.

360° Research View

SUPPLY MODELING

Commodity Research (Price)

- LNG export
- LPG export
- Crude oil export
- Refined products export

Company Evaluation

We have a well-defined process for evaluating current and potential securities.

Business Attributes

- Type of midstream asset and how has it historically performed
- Cash flow—how fixed vs. variable?
- Contract structures and types, and duration

Competitive Positioning

- Macro/Micro Analysis how do their assets fit in?
- Assessment of weaknesses and opportunities

Valuation

- Forecast cash flow, discount back to current
- Operational modeling operational and forecast should sync
- Suitable risk adjusted total return?

Balance Sheet

- Debt to EBITDA leverage current and forecasted
- Can they maintain both a healthy balance sheet and growth objectives?

Management Assessment

- Track record and communication of growth objectives
- Capital allocation assessment
- Trust & long-term partnership

Valuation

There are a variety of ways to quantitatively assess Midstream companies' valuations.

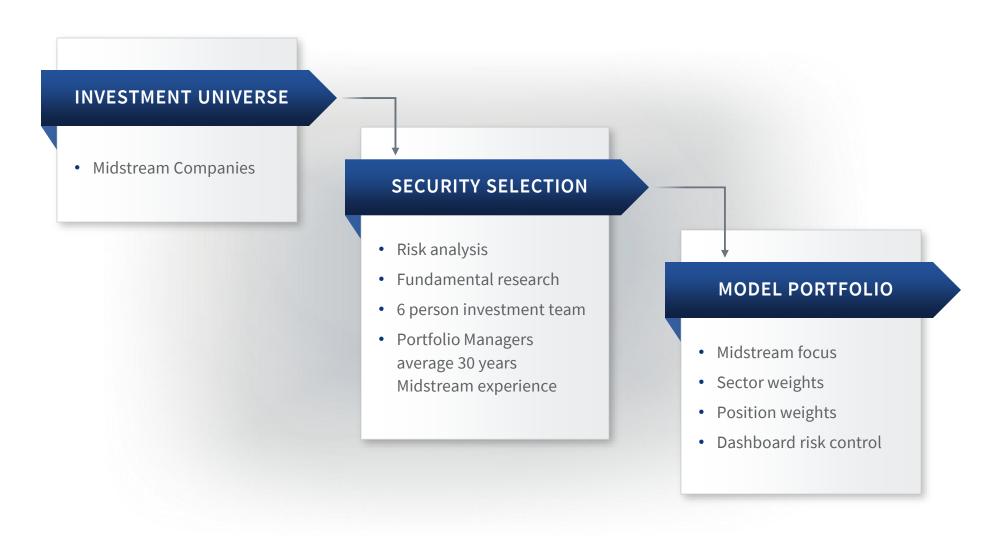

Portfolio Construction

Our portfolio construction process seeks to build a portfolio with less risk and a higher expected return than the average Midstream company.

Portfolio Risk Control

Portfolio risk control is an important consideration in the investment process.

The Model
Portfolio's risk
control policies*
help mitigate
company-specific

AMZ Sector Breakdown

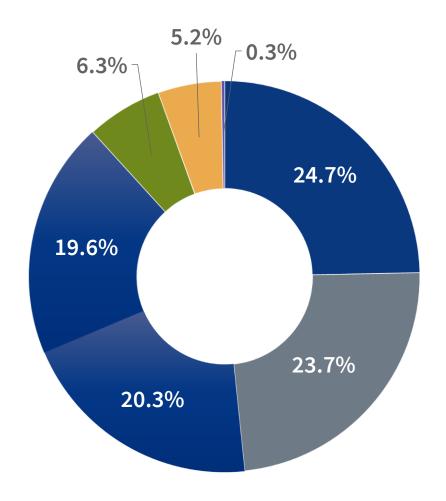

The Alerian MLP Index (AMZ) methodology places each index constituent into one of six sectors.

This may not accurately reflect the full risk profile of a company's total cash flow.

Alerian MLP Index Sector Allocations

- Pipeline Transportation, Petroleum
- Gathering & Processing
- Pipeline Transportation, Natural Gas
- Marketing & Distribution
- Liquefaction
- Compression
- Storage

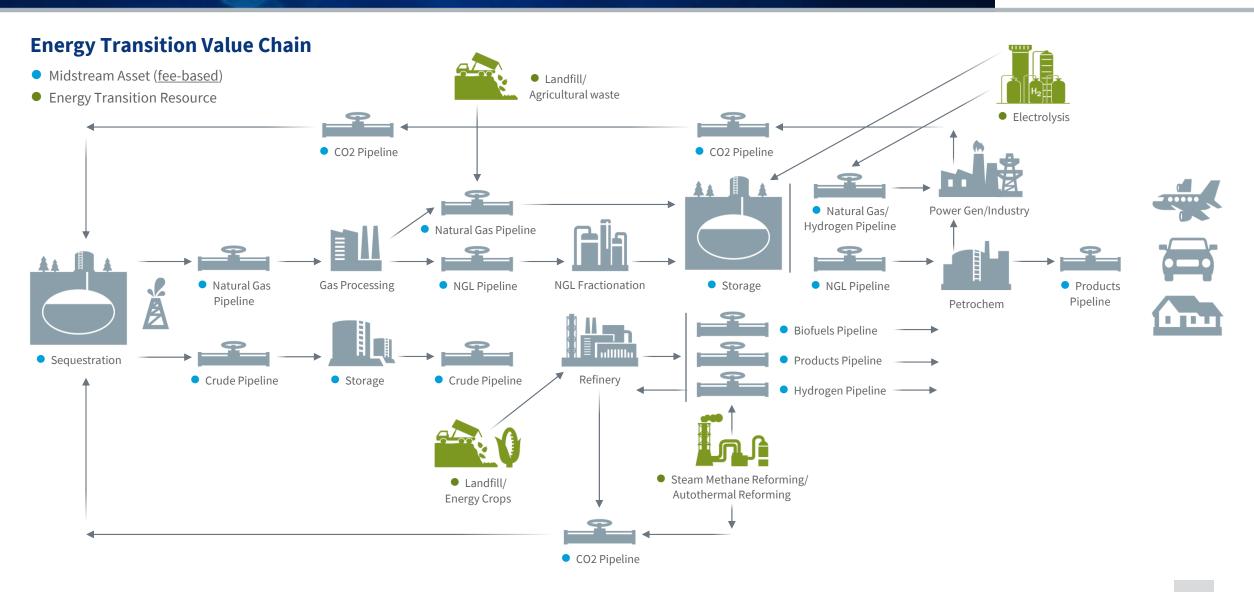

Source: VettaFi LLC, 10/10/25; Note the total may not equal 100% due to rounding.

Midstream Value Chain With Energy Transition Potential

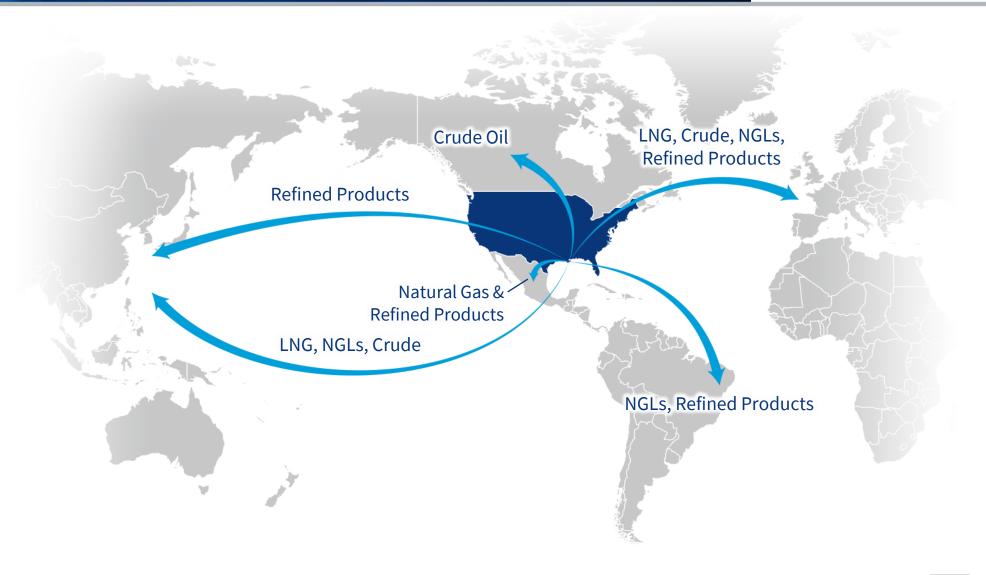

Long Term Driver: U.S. Hydrocarbon Exports

The U.S. has the ability to export all raw and finished hydrocarbons produced domestically to serve global demand.

This helps global economies that have energy deficits and could continue to provide growth opportunities for Midstream companies which own the critical infrastructure needed to move molecules.

Source: EIA, CCM

Cash Flow Spectrum

MLPs have evolved over time into predominantly fee-based businesses that include businesses with less variable streams of cash flow.

Crude and

- Natural Gas Pipelines
- Crude and Refined Products Pipelines
- Storage and Terminaling
- NGL Logistics
- Fixed Fee Gathering and Processing
- LNG Shipping
- Other Logistics/Marketing
- Non-Fixed Fee Gathering and Processing
- Propane Distribution
- Exploration and Production
- Coal
- "Other" Non-Midstream Activities

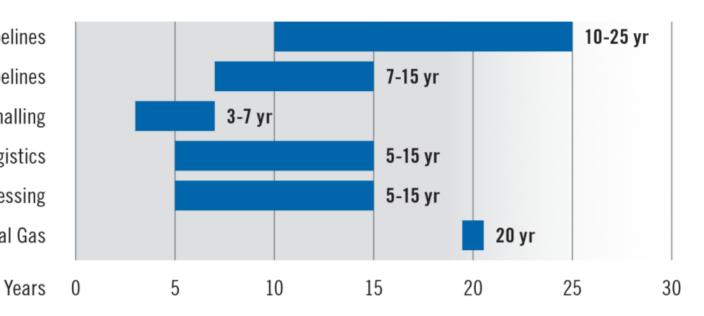

How Midstream Companies Earn Profits

The majority of
Midstream cash
flows are fee-based,
long-term
contracted, and
typically have
inflation protection
built into their
contractual rates.

Contract Length by Subgroup

Natural Gas Pipelines
Crude & Refined Product Pipelines
Storage and Terminalling
Natural Gas Liquids Logistics
Gathering and Processing
Liquified Natural Gas

Source: EIA, FERC, CCM

Protection from Rising Inflation

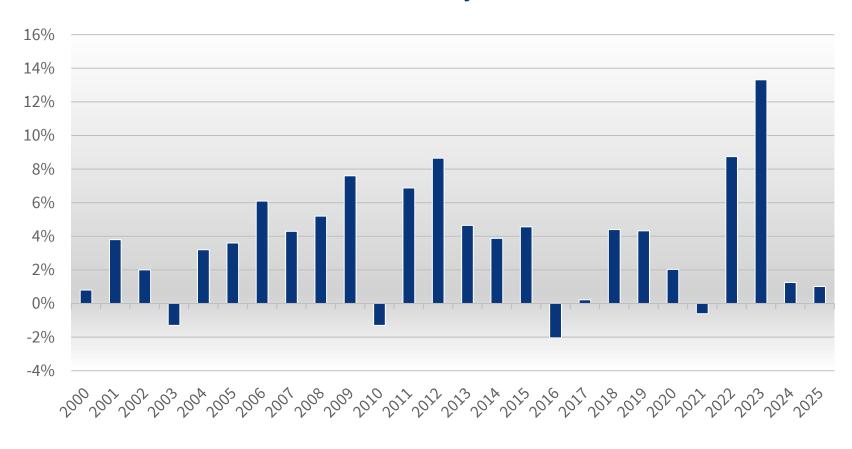

Midstream companies benefit from strong contracts that protect from rising inflation measures, such as CPI and PPI.

Where contractual adjustment may be tied to the PPI finished goods (FG) index, those rates increased 1.01% higher in July 2025 and could reset another 2.6% higher in 2026.

Source: FERC & U.S. Bureau of Labor Statistics, October 2025

FERC Tariff Adjustments

Midstream Companies Exposure to Inflation & Deflation

Midstream companies have characteristics that are attractive to investors in both inflationary and deflationary scenarios.

Inflationary Environment

- We believe hard assets could have an increasing replacement value.
- Long term contracts with price renewal escalators tied to PPI and CPI help to offset potentially higher costs.
- We estimate the majority of contracts are fee-based, though a modest amount of commodity price upside exists in a higher price environment.
- Distribution growth historically higher than the inflation rate, though inflation rates could be higher than recent history.

Deflationary Environment

- Starting with a higher yield could be favorable if yields move lower again.
- Yield compression could provide an additional source of return (capital gain).
- Lower cost of financing could increase corporate flexibility for M&A and increased growth capital expenditures.

Structural Risks to Midstream Companies

There may be structural and fundamental risks to the Midstream asset class, and individual MLPs.

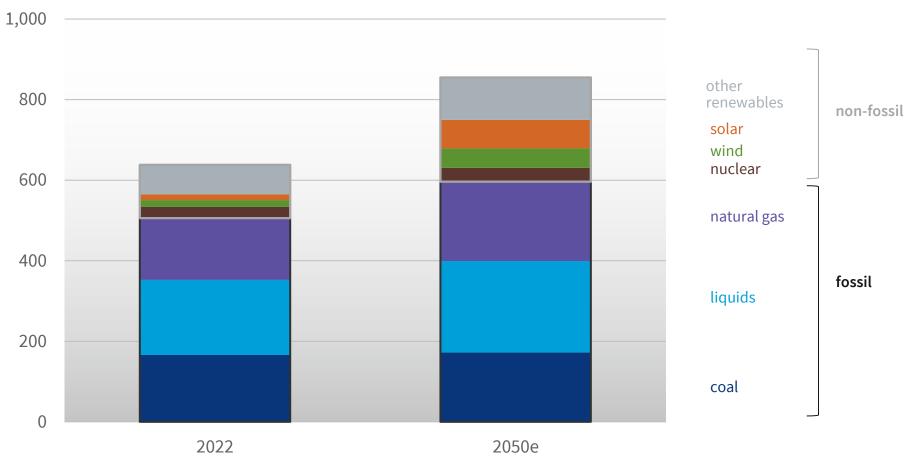

- Regulatory risk The Federal Energy Regulatory Commission (FERC)
 is charged with regulating interstate tariff rates and regulating many Midstream
 companies' business.
- Tax law changes Congress could change the pass-through nature of limited partnerships or make other unfavorable changes to regulations in the tax code.
- End-user demand Change of end-user demand for energy products or innovative energy alternatives could substitute the need for transportation, processing, and storage through the existing infrastructure owned by Midstream companies.
- Commodity prices Lower commodity prices can affect companies through lower customer drilling programs impacting future growth projects, and, for those with equity volumes in their contracts, lower their margins on natural gas and natural gas liquids (NGLs).

Global Energy Usage

Global Primary Energy Use by Fuel (quads)²

Note: Biofuels are included in the "other renewables" category. Quads=quadrillion British thermal units.

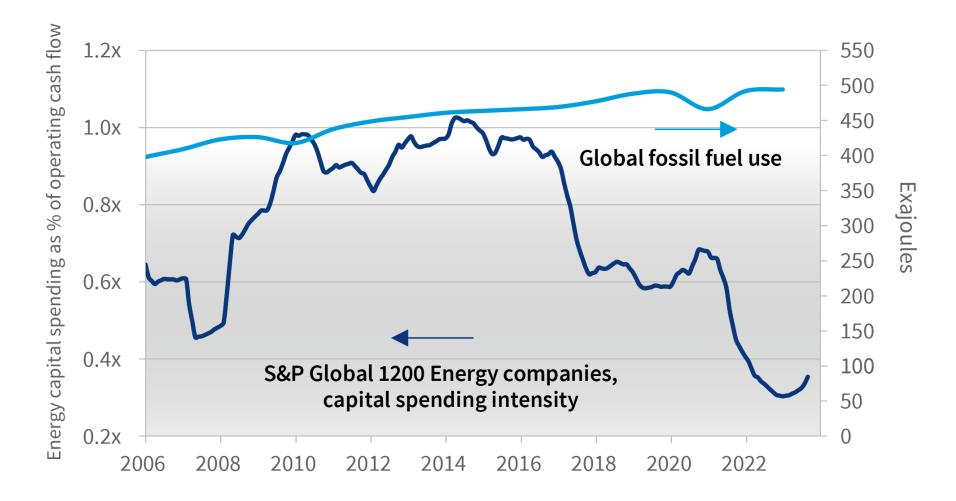

Source: EIA, IEO2023, 10/11/2023.

Underinvestment in Global Energy Supply

Capital markets have dissuaded public energy companies from making new investments during the most recent period.

However, global primary energy use has recovered to prepandemic levels, and the U.S. and Global economies run the risk of having a greater demand for fossil fuels than what the market can supply.

Source: JP Morgan, "Eye on the Market", 9/27/23.

Global Energy Security

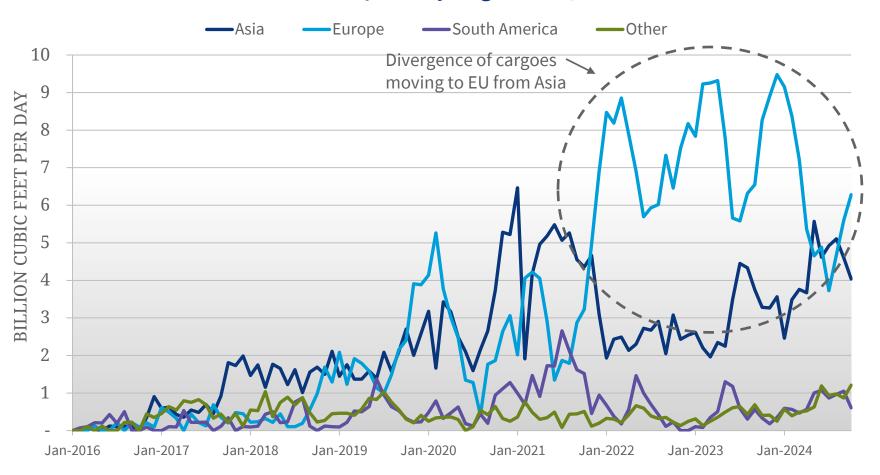

Russia's invasion of Ukraine has placed a renewed focus on global energy security.

On 3/25/22, the Joint Task Force for Energy Security was established to supply EU nations with an incremental 4.8 Bcf/d of liquefied natural gas (LNG) until at least 2030.

Midstream assets are mission critical to delivering increased U.S. natural gas volumes to export markets

US LNG Exports by Region (Bcf/d)

Underinvestment in Global Energy Supply

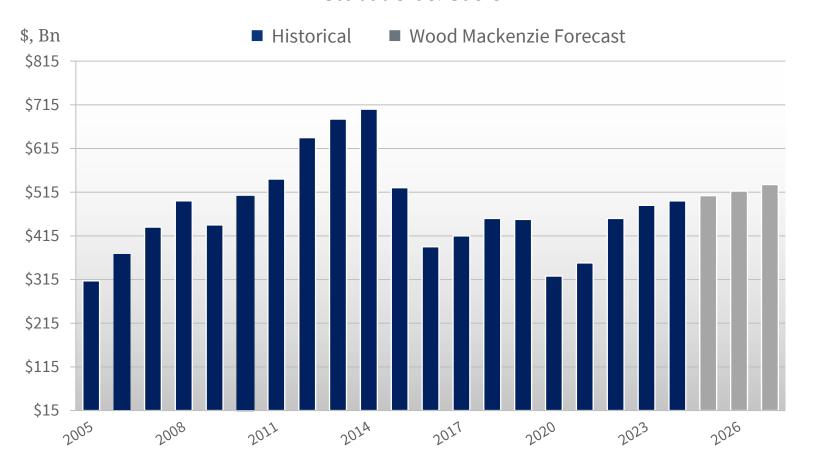

Low potential returns, capital markets, and political rhetoric have dissuaded global energy investment.

Global primary
energy use has
recovered to prepandemic levels, and
the world economies
run the risk of having
a greater demand for
fossil fuels than what
the market can
supply.

Source: Morgan Stanley "The Oil Manual – Chartbook", 7/15/2025

Global Oil & Gas CAPEX

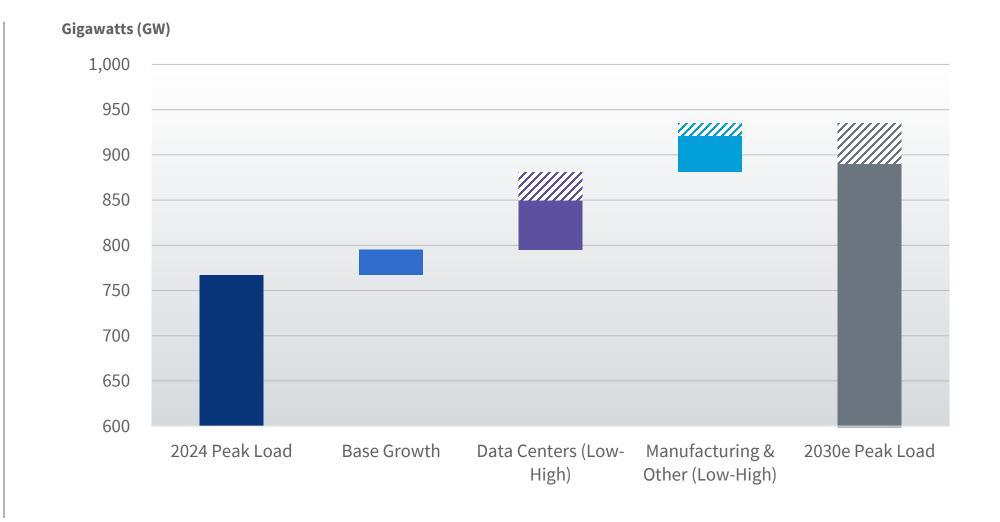

Peak Electricity Load Forecast by Source

Using the high end and low end of traditional and emerging sources of electricity demand, the peak electricity load could potentially grow 3 to 5% per annum over the next 5 years. This is versus 0.5% the previous 10 years.

This could drive strong demand for natural gas to fuel power plants.

Source: CCM, 6/30/25

Long Term Driver: Higher Electricity Growth

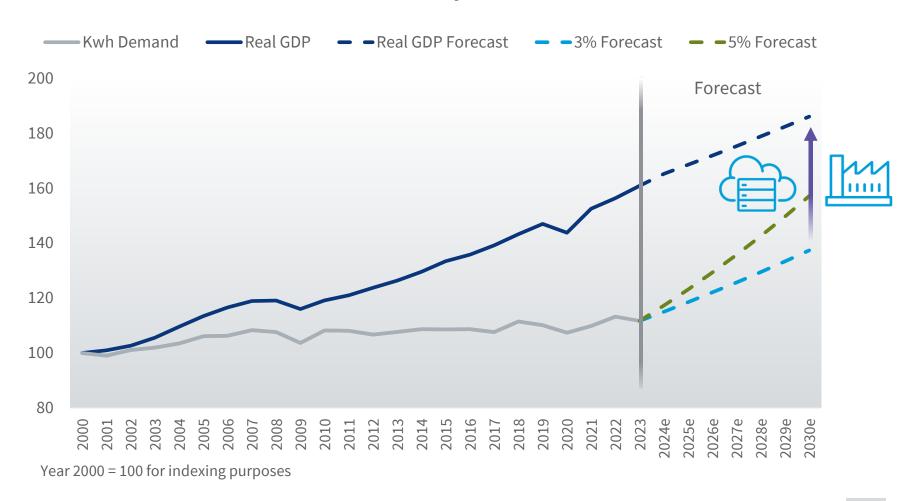

Our analysis indicates electricity growth could grow 3 to 5% per year through the end of the 2020s.

The potential steep rise in consumption from Onshoring and Data Center power needs presents a rich opportunity for natural gas to maintain or grow its share of the electricity pool.

Source: EIA and Federal Reserve Bank of St. Louis, CCM, as of 12/31/24

3% and 5% Electricity vs GDP Growth

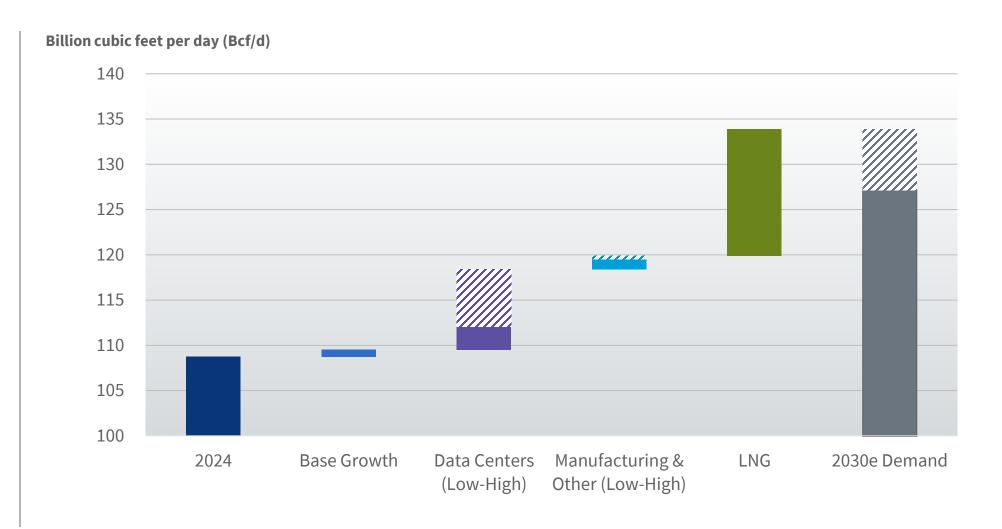

Natural Gas Demand by Source

Investors should remember that there are other competing sources for natural gas use other than electricity demand—principally LNG exports.

Natural gas demand could rise +/- 3% through the end of the decade versus +0.5% 2014-2023

Long Term Driver: LNG Demand Forecast

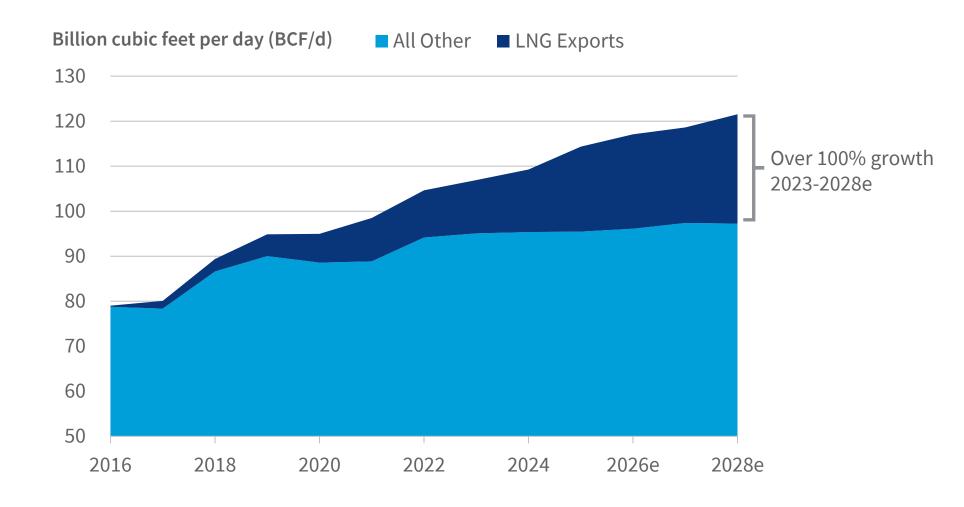

Liquefied Natural
Gas (LNG) demand
growth of ~100%
from 2024 through
2028e far outpaces
the traditional
sources of demand of
~2%, which is in line
with the historical
trend.

If additional projects are approved, 2028e forecasted demand of ~24 billion cubic feet per day (Bcf/d) could increase further by the end of the decade.

Source: EIA, CCM.

Data for periods is presented as an estimate where indicated.

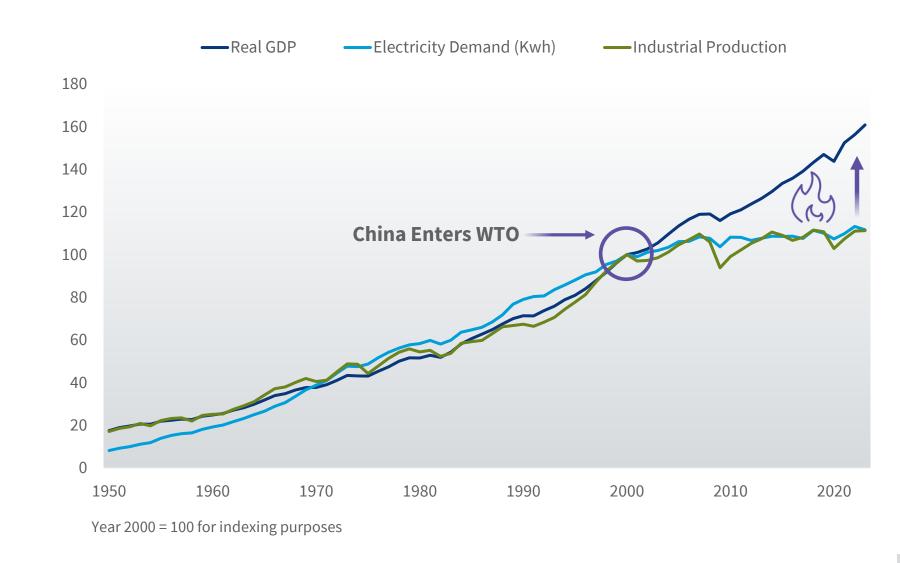

Long Term Driver: Onshoring Demand

U.S. growth in electricity demand and industrial production decoupled from GDP growth when China entered the WTO in 2001.

Onshoring, data centers and other drivers of U.S. commercial activity could cause a dramatic rise in electricity consumption requiring more natural gas.

Source: EIA and Federal Reserve Bank of St. Louis, CCM, 12/31/24

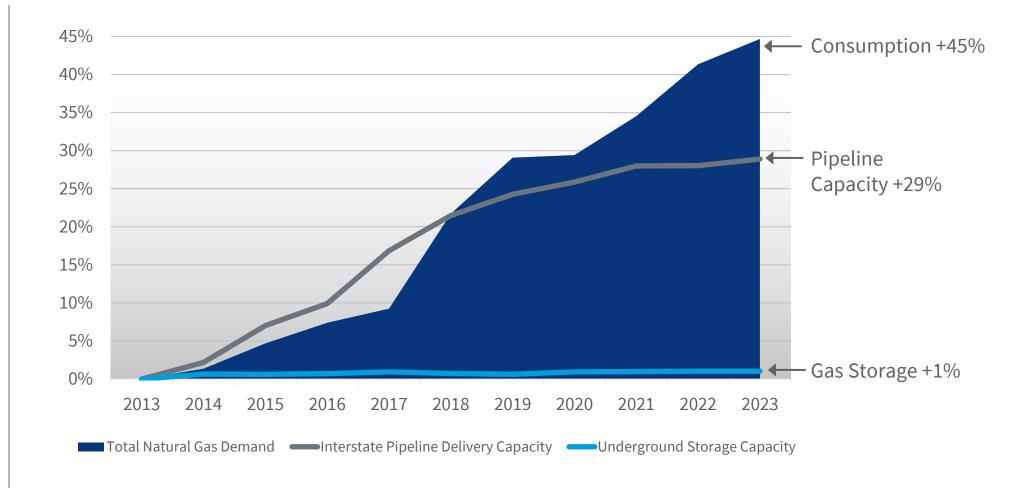

Cumulative Percentage Growth in Gas Demand vs Growth in Pipeline and Storage Capacity, 2013-2023

Due to disciplined capital investment by natural gas companies, incremental capacity for gas pipeline and natural gas storage is not readily available.

Midstream companies with gas assets should be able to provide incremental capacity with favorable economics.

Source: EIA

Natural Gas Demand Versus Supply

Forecasted natural gas demand growth could greatly exceed current supply and pipeline takeaway capacity.

Meeting this demand could require \$10s of billions of dollars of new investment. Billion cubic feet per day (Bcf/d)—Wells Fargo Supply Forecast —Wells Fargo Demand Forecast 140 135 130 125 120 115 110 105 100 2024 2025e 2026e 2027e 2028e 2029e 2030e

Our People

Our people serve as the foundation of our business.

Geoffrey P. Mavar | Principal

Geoffrey is a Principal and co-founder of Chickasaw Capital Management, LLC. He is a member of the firm's Investment Committee. Geoffrey began his investment career at Goldman Sachs & Co. where he served for 11 years and was a Vice President. He began managing Midstream assets on a discretionary basis during his tenure at Goldman Sachs. Geoffrey graduated with a B.A. from The University of Mississippi in 1984. He received an MBA in Finance from the Owen Graduate School of Management at Vanderbilt University in 1990, and served on the Alumni Board of Directors of the Business School from 1999 to April 2007.

Matthew G. Mead | Principal

Matt is a Principal and co-founder of Chickasaw Capital Management, LLC. He is a member of the firm's Investment Committee. Matt began his investment career at Goldman Sachs & Co. where he served for 9 years and was a Vice President. Matt began managing Midstream assets on a discretionary basis during his tenure at Goldman Sachs. He has diverse investment experience across public and private equity, fixed income, and derivative markets. Matt received his B.S. from Birmingham-Southern College in 1990, double majoring in Economics and Finance. He received an MBA from the Fuqua School of Business, Duke University in 1992. Matt has been a member of the Board of Directors of Oakworth Capital Bank since 2008.

Robert M.T. Walker | Principal

Robert is a Principal at Chickasaw Capital Management, LLC where he leads the firm's research efforts. He is a member of the firm's Investment Committee. Robert started his investment management career in 1999 with Haas, Incorporated, a family office in Memphis, and was an analyst with Trinity Capital, an equity hedge fund, before joining Chickasaw. He received his B.A. from Rhodes College in 1999, with a History major and a Business Administration minor. Robert received an MBA from the Owen Graduate School of Management, Vanderbilt University in 2005 where he was the Chairman of the Max Adler Student Investment Fund. He served on the Owen Alumni Board of Directors from 2013 to 2017.

Bryan F. Bulawa | Principal

Bryan is a Principal at Chickasaw Capital Management, LLC. He was most recently the Chief Financial Officer at Enterprise Products Partners, LP, having joined them in 2007 in the role of Treasurer. He was selected as the top-ranked CFO in the Natural Gas Pipeline and Master Limited Partnership sector by both buy-side and sell-side firms in Institutional Investor's 2018 and 2019 surveys. Bryan successfully executed over \$40 billion of equity and debt financing while maintaining an industry leading low-cost of capital, top-of-sector equity analyst ratings and credit ratings. Bryan was an active deal team member in the \$6 billion Oiltanking M&A transaction, resulting in an interim role as Chairman of the Board for Oiltanking GP from October 2014 to February 2015. He served as an active deal team member in all partnership simplification transactions resulting in four publicly traded securities (NYSE listed: EPD/EPE/TPP/DEP) combining into one security and the elimination of Incentive Distribution Rights in 2010. Prior to Enterprise, Bryan enjoyed a career in corporate and investment banking for over a decade at Scotiabank. Bryan received his B.S. in Finance from the University of Wyoming in 1991.

Our people serve as the foundation of our business.

Scott B. Warren, CFA | Senior Analyst

Scott is a Senior Analyst at Chickasaw Capital Management, LLC. He began his career with KPMG in 2010 as an Audit Senior Associate, and most recently served as a Valuation Senior Associate in Atlanta. While working in the KPMG valuation group, Scott performed business and asset valuations across diverse assignments including business combinations, and analysis of complex securities such as derivatives and loan portfolios using a variety of appraisal methods. He received his Master in Accountancy, cum laude in 2010 and his Bachelor of Accountancy (Minor in Finance) in 2008 from the University of Mississippi. He is a CFA® charterholder. He was also a Certified Public Accountant (2011-2015).

Luke B. Davis, CFA | Senior Analyst

Luke is a Senior Analyst at Chickasaw Capital Management, LLC. He graduated with a M.S. in Finance from Vanderbilt University, Owen Graduate School of Management in 2014 where he served as an analyst and portfolio manager for the Max Adler Student Investment Fund. Luke has completed internships at EBSCO Industries, Petra Life Services, and Hanson and Wells Partners. Luke graduated cum laude from Samford University in May 2013 with a B.S. in Finance and Economics where he was a University Fellow, a Presidential Scholar. He also served as an analyst and portfolio manager for Samford's Bulldog Investment Fund. He is a CFA® charterholder.

Andrew Z. Lapsley, CFA | Managing Director

Drew is a Managing Director at Chickasaw Capital Management, LLC, focused on the Client Portfolio Management team. He most recently was a Vice President at Goldman Sachs Asset Management where he served for 18 years. Drew was the lead Client Portfolio Manager for energy and infrastructure investing, having worked on the Goldman energy team since the inception of their fund(s). Drew began his career as an engineer at the Dow Chemical Company, and started his finance career in Houston in 1997 at AIM Management Group (now Invesco) in electronic commerce. Drew is a graduate of Mount Royal University and the University of Calgary, both in Alberta, Canada, and holds graduate degrees in Computer Science and Engineering. He is a CFA® charterholder.

Bloomberg Barclays US High Yield: measures the USD-denominated, high yield, fixed rate corporate bond market. Securities are classified as high yield if he middle rating of Moody's, Fitch and S&P is Ba1/BB+/BB+ or below.

Bloomberg WTI Cushing Crude Oil: West Texas Intermediate (WTI), also known as Texas light sweet, is a grade of crude oil used as a benchmark in oil pricing. This grade is described as light because of its relatively low density, and sweet because of its low sulfur content. It is the underlying commodity of Chicago Mercantile Exchange's oil futures contracts.

DJIA Total Return Index: Tracks the total return of The Dow Jones Industrial Average, a price-weighted average of 30 significant stocks traded on the New York Stock Exchange and the Nasdaq. Dividends are reinvested. The DJIA was invented by Charles Dow back in 1896.

DJ Americas Select Real Estate Securities Index: Measures the performance of publicly traded real estate securities. Designed to serve as proxies for direct real estate investment, in part by excluding companies whose performance may be driven by factors other than the value of real estate. Represents equity real estate investment trusts (REITs) and real estate operating companies (REOCs) traded in the Americas region.

FTSE NAREIT US Real Estate Total Return Index Series: Tracks the total return of the FTSE NAREIT US Real Estate Index Series which is designed to present investors with a comprehensive family of REIT performance indexes that spans the commercial real estate space across the US economy. Dividends are reinvested. The index series provides investors with exposure to all investment and property sectors. In addition, the more narrowly focused property sector and sub-sector indexes provide the facility to concentrate commercial real estate exposure in more selected markets.

MSCI World Total Return Index: Tracks the total return of the MSCI World Index, a market capitalization weighted index designed by Morgan Stanley Capital International to track the overall performance of commodity producers throughout the world. Dividends are reinvested. Stocks in the MSCI All Country World Commodity Producers Sector Capped Index are primarily focused on emerging market economies.

Additional Information (continued)

NASDAQ: A market-capitalization weighted index of the more than 3,000 common equities listed on the Nasdaq stock exchange. The types of securities in the index include American depositary receipts, common stocks, real estate investment trusts (REITs) and tracking stocks. The index includes all Nasdaq listed stocks that are not derivatives, preferred shares, funds, exchange-traded funds (ETFs) or debentures.

Russell 2000: An index measuring the performance approximately 2,000 small-cap companies in the Russell 3000 Index, which is made up of 3,000 of the biggest U.S. stocks. The Russell 2000 serves as a benchmark for small-cap stocks in the United States.

S&P 500 Total Return Index: Tracks the total return of the S&P 500 Index, an index of 500 stocks chosen for market size, liquidity and industry grouping, among other factors. Dividends are reinvested. The S&P 500 is designed to be a leading indicator of U.S. equities and is meant to reflect the risk/return characteristics of the large cap universe.

S&P 500 Information Technology Index: The S&P 500® Information Technology Index comprises those companies included in the S&P 500 that are classified as members of the GICS® information technology sector.

S&P 500 Real Estate Index: The S&P 500® Real Estate Index comprises those companies included in the S&P 500 that are classified as members of the GICS® real estate sector.

S&P 500 Utilities Index: The S&P 500® Utilities Index comprises those companies included in the S&P 500 that are classified as members of the GICS® utilities sector.

S&P GSCI Total Return Index: Tracks the total return of the S&P GSCI, a composite index of commodity sector returns representing an unleveraged, long-only investment in commodity futures that is broadly diversified across the spectrum of commodities. Dividends are reinvested. The returns are calculated on a fully collateralized basis with full reinvestment.

One cannot directly invest in an index.

Alpha is used in finance as a measure of performance, indicating when a strategy, trader, or portfolio manager has managed to beat the market return over some period. Alpha, often considered the active return on an investment, gauges the performance of an investment against a market index or benchmark that is considered to represent the market's movement as a whole.

Annualized Standard Deviation measures the dispersion or uncertainty in a random variable, such as an investment return. It measures the degree of variation of the random variable around the mean. The higher the volatility of the random variable, the higher the standard deviation will be. For this reason, standard deviation is often used as a measure of investment risk. Annualized Standard Deviation is equal to monthly standard deviation multiplied by the square root of 12.

Bcf/d is billion cubic feet per day.

Beta is the slope of the regression line. Beta measures the investment relative to the market. It describes the sensitivity of the investment to market movements. The market can be any index or investment specified.

CAGR is compound annual growth rate. The compound annual growth rate is the rate of return that an investment would need to have every year in order to grow from its beginning balance to its ending balance, over a given time interval. The CAGR assumes that any profits were reinvested at the end of each period of the investment's life span.

Cash Flow is a revenue or expense stream that changes a cash account over a given period. Cash inflows usually arise from one of three activities - financing, operations or investing - although this also occurs as a result of donations or gifts in the case of personal finance. Cash outflows result from expenses or investments. This holds true for both business and personal finance. Cash flow can be attributed to a specific project, or to a business as a whole. Cash flow can be used as an indication of a company's financial strength.

Cash Flow from Operations (CFFO) indicates the amount of money a company brings in from its ongoing, regular business activities, such as manufacturing and selling goods or providing a service to customers.

Correlation measures the extent of linear association of two variables.

CPI (Consumer Price Index) is a measure of prices paid by consumers for a market basket of consumer goods and services. The yearly (or monthly) growth rates represent the inflation rate.

Distributable Cash Flow is calculated as net income plus depreciation and other noncash items, less maintenance capital expenditure requirements.

Distributions are quarterly dividend payments made to Limited Partner (LP) and General Partner (GP) investors. These amounts are set by the GP and are supported by an MLP's operating cash flows.

Distribution Coverage Ratio is calculated as cash available to limited partners divided by cash distributed to limited partners. It gives an indication of an MLP's ability to make dividend payments to limited partner investors from operating cash flows. MLPs with a coverage ratio of in excess of 1.0 times are able to meet their dividend payments without external financing. The coverage ratio on slide 24 is for estimated 2025 coverage on a weighted average basis.

E&P is short for exploration and production, which is the early stage of energy production that consists of looking for oil and gas and then extracting it.

Earnings growth is the annual rate of growth of earnings from investments.

EBITDA is earnings before interest, taxes, depreciation and amortization.

EIA is the U.S. Energy Information Administration.

EV/EBITDA is a ratio used to determine the value of a company. The enterprise multiple looks at a firm as a potential acquirer would, because it takes debt into account – an item which other multiples like the P/E ratio do not include. Enterprise multiple is calculated as: Enterprise multiple = EV/EBITDA.

FCFaD is free cash flow after dividends/distributions.

FERC is the U.S. Federal Energy Regulatory Commission.

Additional Information (continued)

Free cash flow (FCF) is a measure of financial performance calculated as operating cash flow minus capital expenditures.

Free Cash Flow to Equity (FCFE) represents the amount of cash a company can pay to equity shareholders after all expenses, reinvestments, and debt payments.

G&P is short for gathering and processing, which consists of gathering, compressing, treating, processing and transporting natural gas and gathering, storing and terminaling crude oil.

GDP is gross domestic product. Gross domestic product is the total monetary or market value of all the finished goods and services produced within a country's borders in a specific time period. As a broad measure of overall domestic production, it functions as a comprehensive scorecard of a given country's economic health.

Growth Capital Expenditures or Growth CapEx or GCX refers to the aggregate of all capital expenditures undertake to further growth prospects and/or expand operations and excludes any maintenance and regulatory capital expenditures.

GW is gigawatt.

IEA is the International Energy Agency.

Intrinsic Value is a measure of what an asset is worth. This measure is arrived at by means of an objective calculation or complex financial model. Intrinsic value is different from the current market price of an asset. However, comparing it to that current price can give investors an idea of whether the asset is undervalued or overvalued.

Kwh is kilowatt hour.

LNG is liquefied natural gas.

LPG is liquefied petroleum gas.

Midstream companies, as used herein, are companies engaged primarily in midstream energy infrastructure regardless of entity structure or tax status. Midstream companies includes master limited partnerships (MLPs) that are organized as partnerships or limited liability companies which elect to be taxed as partnerships, as well as corporations and other entities which elect to be taxed as corporations (i.e., C-corps), many of which are the successors to MLPs that have consolidated into or with a C-corp parent or subsidiary thereof. Midstream interests, as used herein, are securities issued by Midstream companies.

MMB/d is million barrels per day.

Net Debt To EBITDA Ratio is a measurement of leverage, calculated as a company's interest-bearing liabilities minus cash or cash equivalents, divided by its EBITDA. The net debt to EBITDA ratio is a debt ratio that shows how many years it would take for a company to pay back its debt if net debt and EBITDA are held constant. If a company has more cash than debt, the ratio can be negative.

NGL is natural gas liquids.

OFS is short for oil field services, which is the industry for all products and services associated with the oil and gas exploration and production process. In general, these companies are engaged in the manufacturing, repair and maintenance of equipment used in oil extraction and transportation.

PPI (Producer Price Index) is a measure of the change in the price of goods as they leave their place of production.

Return on Invested Capital (ROIC) is the amount of money a company makes that is above the average cost it pays for its debt and equity capital. ROIC is used to assess a company's efficiency at allocating the capital under its control to profitable investments. ROIC = EBIT (1 - Tax rate) / (Total Assets – Total Liabilities).

West Texas Intermediate (WTI), also known as Texas light sweet, is a grade of crude oil used as a benchmark in oil pricing. This grade is described as light because of its relatively low density, and sweet because of its low sulfur content. It is the underlying commodity of Chicago Mercantile Exchange's oil futures contracts.

WTO is the World Trade Organization.

Yield refers to the cash dividend or distribution divided by the share or unit price at a particular point in time.

Slide 9: Information contains current holding DTM, which IPO'd on 9/13/21. Information through 9/12/21, is adjusted to exclude the current weighting in DTM. Impact to results is *de minimis*.

Slide 10: The JPMorgan Alerian MLP Index ETN (AMJB) is used herein to create a per unit index price for the Alerian MLP Index (AMZ). Alerian MLP Index Exchange Traded Notes ("ETNs") provide investors a way to gain exposure to midstream energy MLPs. The ETNs pay a variable quarterly coupon linked to the cash distributions paid on the MLPs in the index, less accrued tracking fees of 0.85% per annum. The ETNs are senior, unsecured obligations of JPMorgan Chase & Co. Note that the tracking fee of 0.85% may cause the performance of the AMJB to lag that of the AMZ, thus potentially understating the P/DCF ratio set forth on this slide.

Slide 11: Versions of this presentation prior to October 2024 used a different methodology for the EV/EBITDA of the AMZX. Historical periods shown herein have been updated to reflect the new methodology, limiting comparability to versions of this presentation prior to October 2024. Please contact us with any questions on the methodology used herein.

Additional Information (continued)

Slide 24:

- Prices and data as of 9/30/25; prices and distribution estimates sourced from Bloomberg LP;
 Distributable Cash Flow (DCF) data is CCM-calculated consensus of Wall Street estimates. All data is current year information.
 - The coverage ratio and growth rate has been adjusted to exclude companies for which there are not DCF estimates, and then re-weighted with holdings for which DCF estimate data is available.
 - For the Model Portfolio, this is ~1% and excludes: PSX
 - For the Alerian, this is ~5.2% and excludes: CAPL, CCLP, DKL, GLP, GPP, MMLP, SGU, SMLP
- Market Capitalization, Portfolio Yield, Coverage Ratio (DCF/Distribution) and Distributable Cash Flow (DCF) Growth are weighted averages.
- Yield and Coverage Ratio are the consensus estimates for 2025. Distributable cash flow Growth refers to the consensus forecast from 12/31/24-12/31/25.

Slide 31: The historical market capitalization and average trading volumes is for energy MLP interests which include securities issued by MLPs that are organized as partnerships or limited liability companies which elect to be taxed as partnerships and securities that offer economic exposure to MLPs from entities holding primarily general partner or managing member interests such as MLP i-shares and common stock of C-Corps that control general partners.

- Current tickers: AM, ARIS, ARLP, BSM, CAPL, CLMT, CNXC, CQP, ENBL, DKL, DLNG, DMLP, DKL, DTM, DMLP, EE, EMES, ENB, ENLC, EPD, ET, GEI.CN GEL, GLOP, GLP, GMLP, HEP, HESM, KEY.CN, KMI, KNOP, KNTK, KRP, LNG, MMLP, MPLX, NBLX, NEP, NGL, NMM, NRP, OKE, PAA, PAGP, PBA, PSX, RGP, SGU, SMLP, SOBO, SPH, SRLP, SUN, TRGP, TRP, USDP, USAC, VNOM, WES, WLKP, WMB.
